

Solutions Overview

Leading edge technology...

CyberImaging applications provide innovative facial measurement and imaging solutions to the optical industry. A proprietary three-dimensional (3D) imaging engine automatically creates realistic simulations of virtual eyewear. Ultrasonic sonar captures precise measurements ensuring a perfect fit the first time.

Industry focus ...

Optical Retailers are using CyberImaging technology to increase profitability by eliminating remakes and selling more premium services. The CyberEyes Imager creates the ultimate fitting experience for patients. It calculates digital sonar measurements providing a better fit and better vision for the patient. Patients can visually simulate lens options to make more educated decisions about their eyewear resulting in more profits for the practice.
